Hi! I'm Neoliberalism. My purpose in the world is to make sure Capitalism Survives and Thrives.
... That means I will do my best to keep the path to profit clear.

I ♥ capital!

NEOLIBERALISM
...the ultimate capitalist machine...

under my direction, the Role of government and government spending must change.
no longer does government have to pretend to protect the people - by managing the impact of capitalism on the workers, for example.
Instead the state's role is to protect capitalism - to make it as efficient as possible - at the expense of the people.
The role of government then is to quell discent and police the people to ensure uninterrupted market forces. Even when that means uninterrupted devastation to the social saftey net, insecure working conditions, poverty...

All barriers to the market must go!

FOR SALE to the highest bidder

Education

Health care

Rights

Electricity

Water

Jobs + workers

Budget Restraints

Government shifts how it will spend money. Since the priority is maximizing profits, privitization is part of this. ie/ government-provided healthcare?! waste of money! Sell health care to a private company - it'll be more economically efficient... and if you can't pay - then too bad!
Privitization of services doesn't just stop with education and healthcare...

get out of the way!

keep quiet

...It also means we've created a new market - new people to buy things, new things to buy... like... water... electricity... air?...

This fits in perfectly with a barrier free competitive economic market. I'm so excited!!

I ♥ the GZO!

And it doesn't stop there... I also make sure states get rid of pesky regulations and national controls on import of goods

Eliminate national controls!

tarrifs & quotas are just going to slow the market down - I want to see less power to national economic interests that also ensure secure employment and more power given to international institutions like the World Trade Organization

Borders will be opened ... to business (not people) and states will reduce regulations (that protect workers, people's health, the environment etc...) to entice business

"Business friendly climate"

NAFTA

SPP

social safety net

snip! snip! snip!

Everyone (with money) is welcome come on!

To Break down

Here! Please take it all! ours... I like it!

fuck the people

Parliament
